Marketing Department System User Manual

Overview

Marketing work is split across two entry points. Both use the same account and share the same data. Day-to-day operations and campaign management live in office; content production and distribution live in marketing.

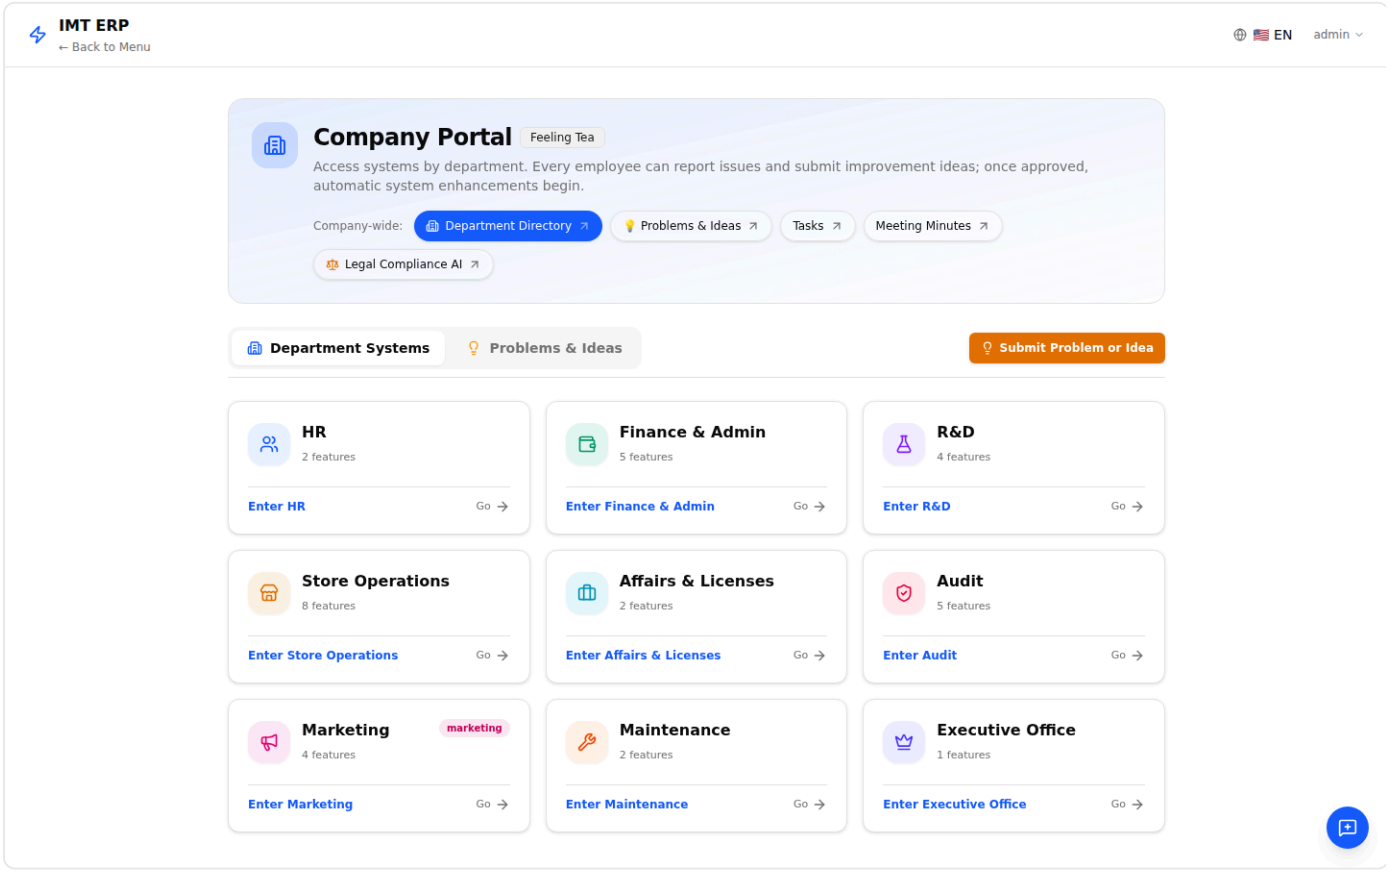

Entry point	URL	Main use	For
IMT ERP Marketing	Marketing department on office.im-tourist.com (/mkt)	Company and product data, campaign planning, member CRM, delivery platforms, analytics, content calendar	Marketing managers, store marketing, planners
Marketing Center	marketing.im-tourist.com	AI images and video, social posting, marketing automation, lead generation, marketing log	Social media editors, designers, business development

Sign-in and permissions

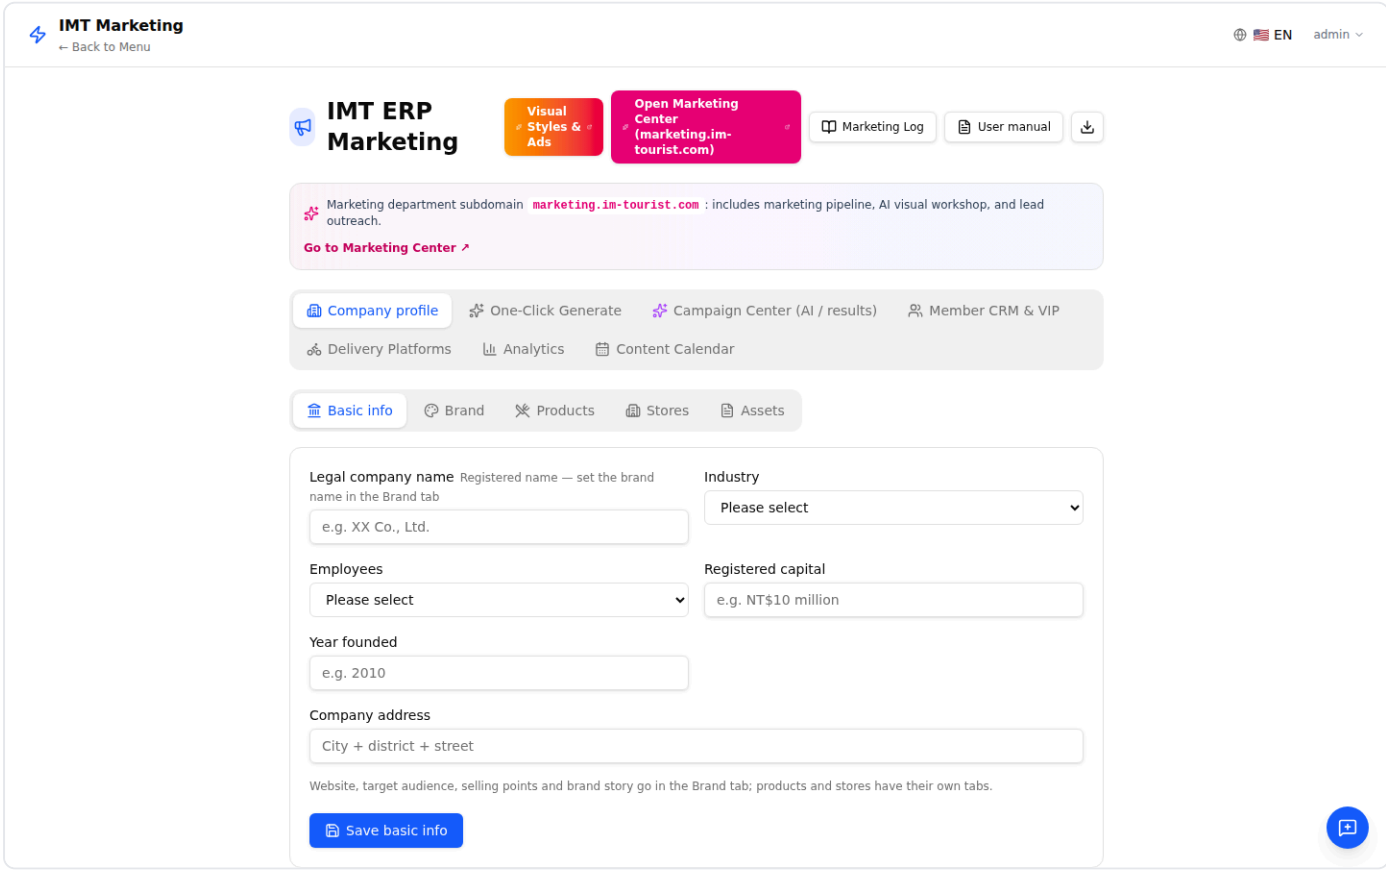

1. Sign in to either URL with the account your company gave you. Both sites share the sign-in session.
2. Your account needs the "Marketing" module enabled. If you can't see a page or are sent back to the main menu, ask an administrator to enable it.
3. You can switch between the two: on the office marketing page, use "Open Marketing Center" at the top right; in the Marketing Center, use "ERP Marketing" at the bottom of the left menu.
4. Switch between Traditional Chinese, English and Vietnamese at the top right of the screen.

office Marketing (IMT ERP Marketing)

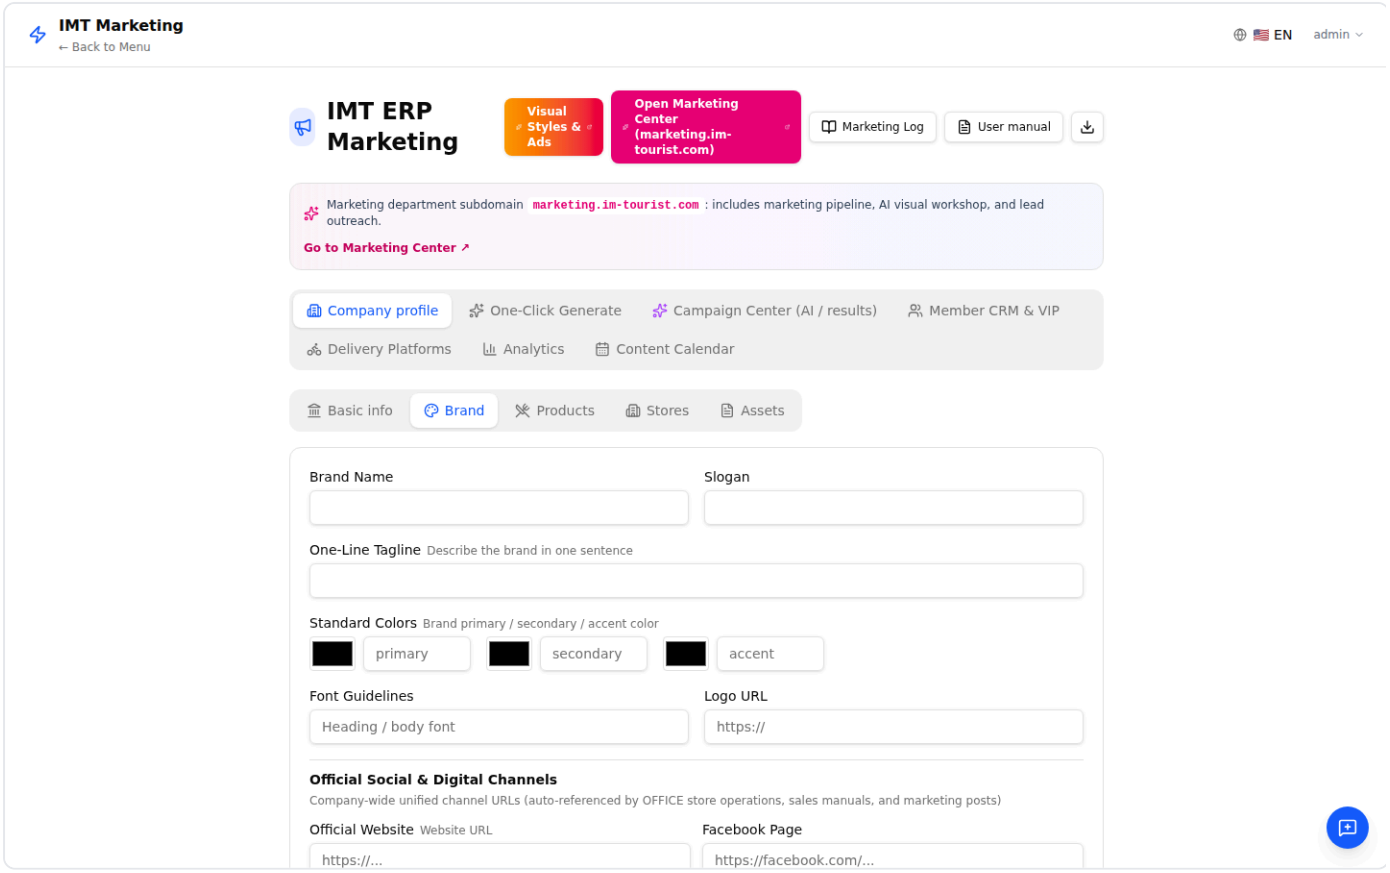

On office.im-tourist.com, click "Marketing". There are 8 tabs at the top. New staff should read "Company profile" first: every AI output draws on the brand and product data stored there.

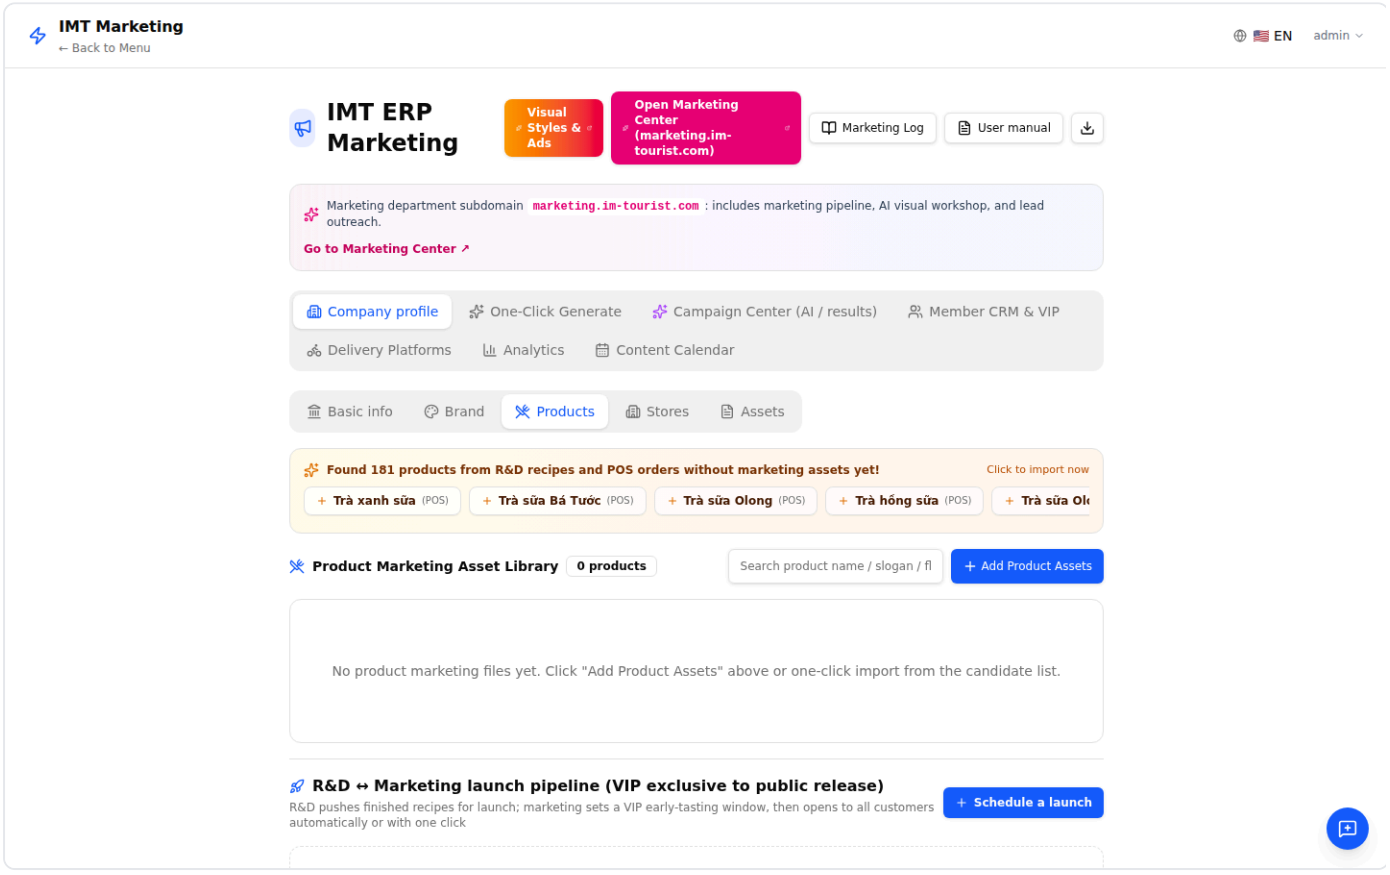

Company profile

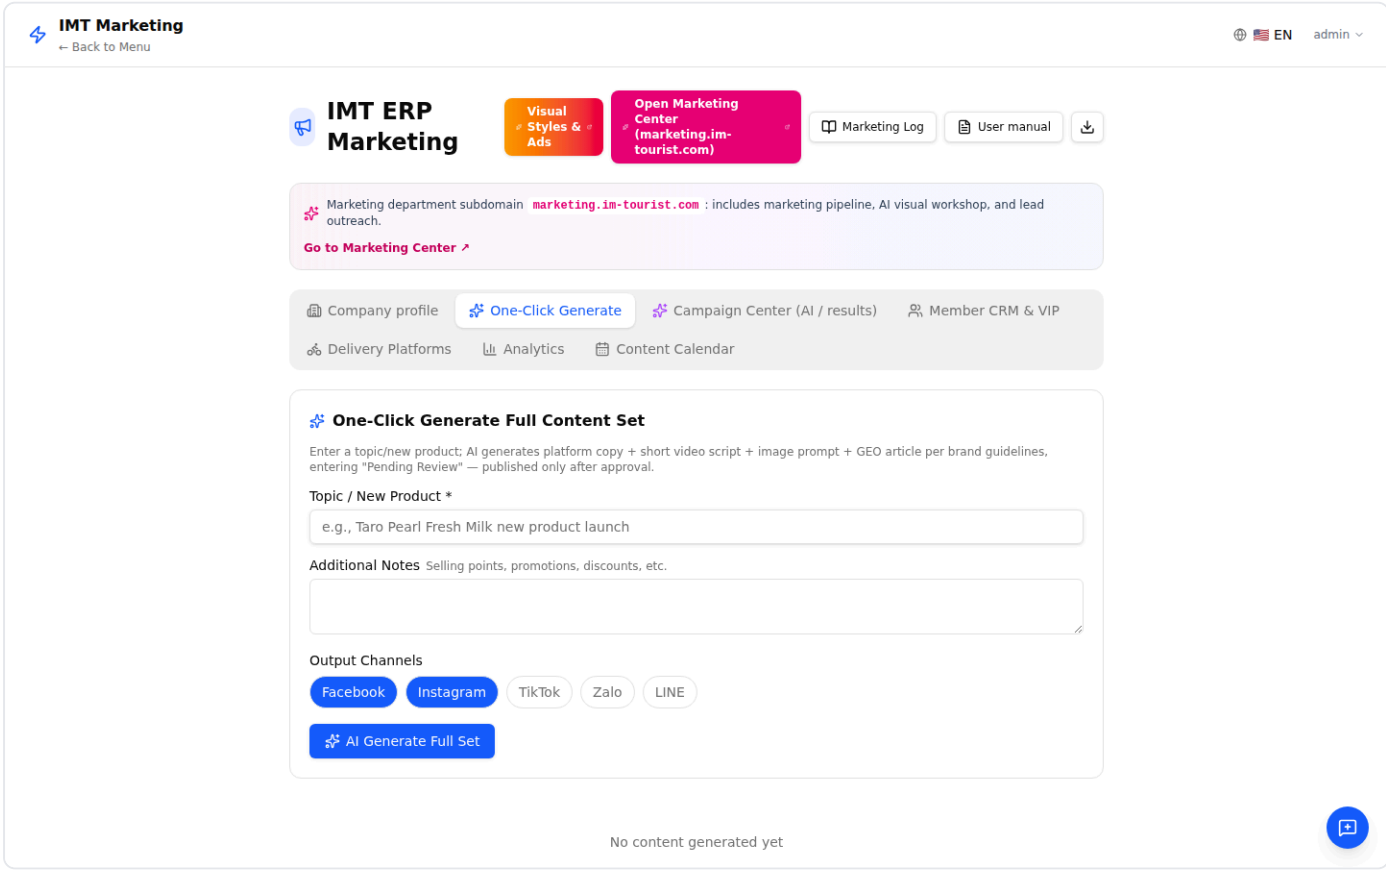

- **Brand & Official Channels**: brand name, slogan, brand colors, fonts, logo, website and Facebook / LINE / Zalo / Google Business links. Brand voice, target audience, selling points, brand story and banned words directly shape the copy AI writes.
- **Store Assets**: store names and codes sync from OFFICE unit data. Here you only add the cover photo, interior photos, store story, opening hours, Google Maps and delivery links.
- **Product Assets**: each product's cut-out image, slogan, taste description and flavor notes. The system flags products that exist in R&D recipes and POS but have no marketing assets yet. New products pushed from R&D also get their VIP early-access period and general launch date set here.

R&D ↔ Marketing launch pipeline (VIP exclusive to public release)
R&D pushes finished recipes for launch; marketing sets a VIP early-tasting window, then opens to all customers automatically or with one click
+ Schedule a launch

One-Click Generate

1. Fill in "Topic / new product" (required) and extra notes (selling points, offers).
2. Tick the platforms: Facebook, Instagram, TikTok, Zalo, LINE.
3. AI produces copy for each platform, a short-video script, image prompts and a GEO article, with status "Pending Review".
4. Content is published only after a manager approves it, and is then added to the "Content Calendar" automatically.

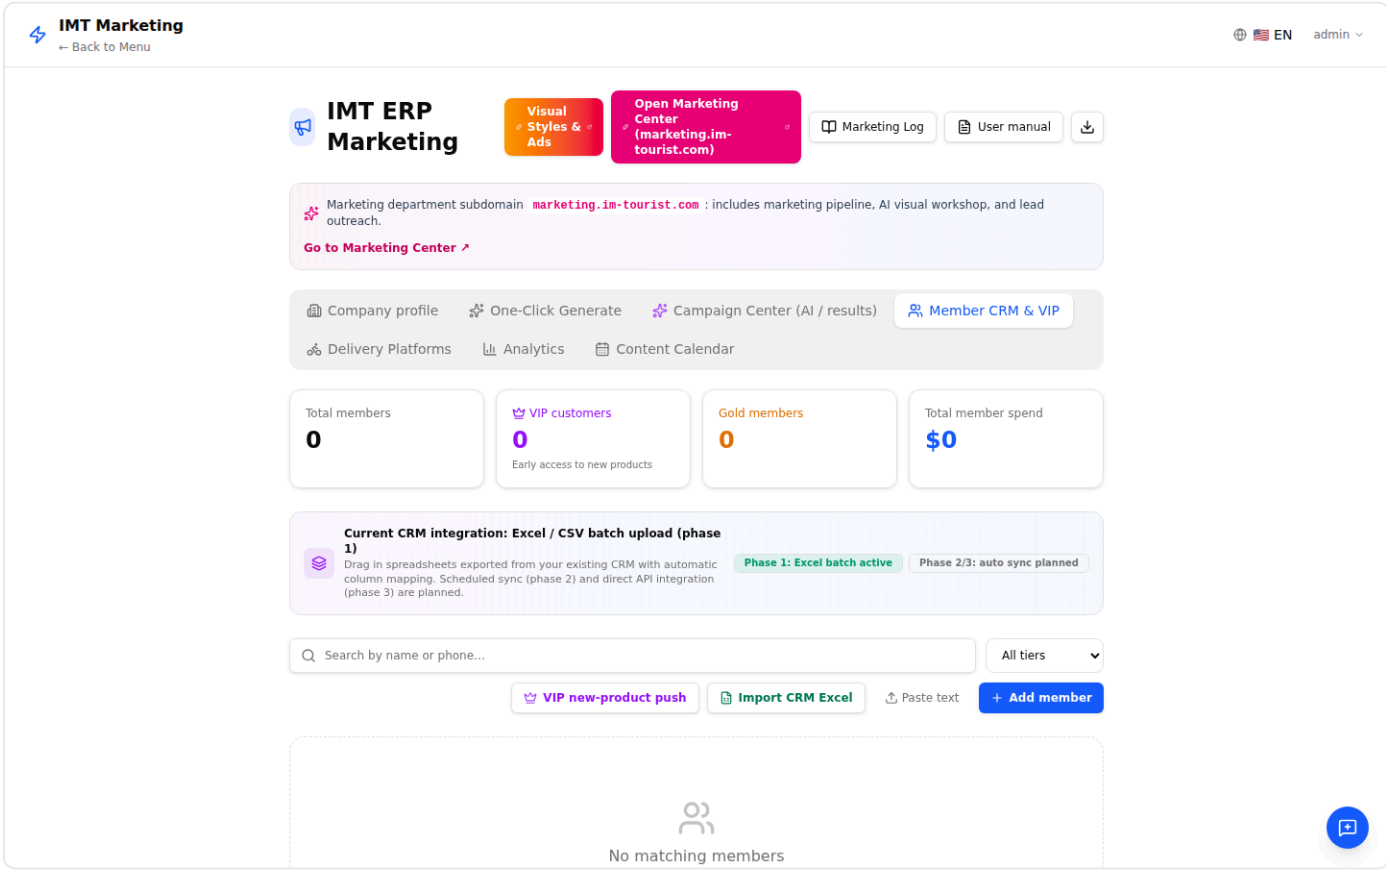

Campaign Center (AI / results)

All marketing campaigns are created here, including what used to be "Offline Marketing". There are three channels: Offline (store / pop-up), Online (social / delivery) and Hybrid (OMO).

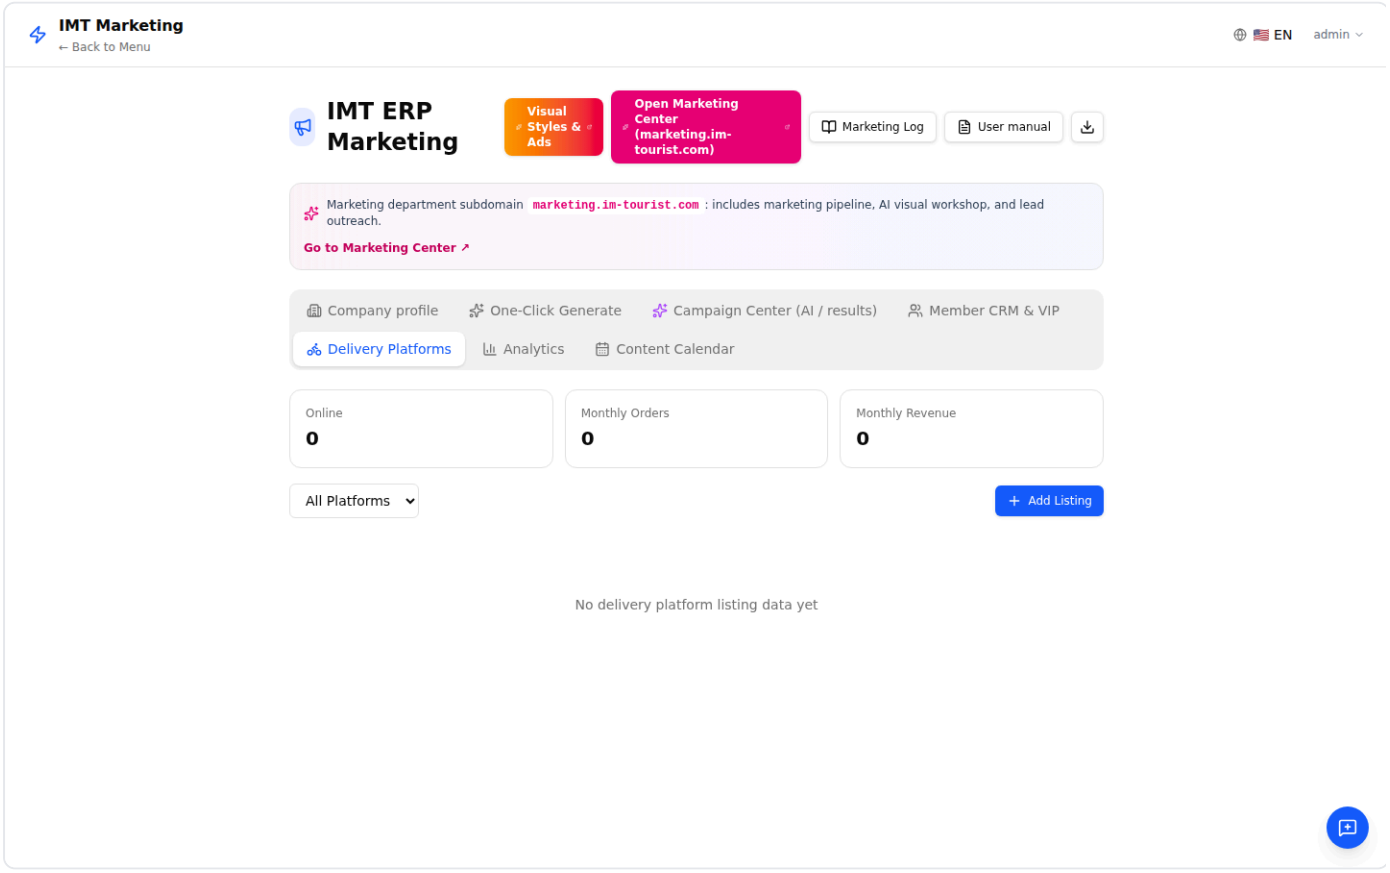

1. To have AI plan it: click "AI planner", enter the campaign topic, budget and extra requirements. AI produces a theme, offer mechanics, store talking points and a checklist. If you're happy with it, click "Use this plan and save".
2. To create one yourself: click "New campaign" and fill in name, channel, category, stores, dates, budget, actual spend, partners and on-site photos.
3. Categories: store materials, street / pop-up event, outdoor ads, cross-industry partnership, social promotion, delivery promotion, VIP member exclusive.
4. Results: first click "Import iPOS report" and upload the daily revenue report or product sales detail exported from iPOS (.xlsx / .xls / .csv). Open a campaign to see revenue during the campaign, comparison with the previous period (PoP) and the same period last year (YoY), ROI, and the after-effect 7 to 14 days after it ends. Re-importing the same store and date updates the data instead of adding to it.

Member CRM & VIP

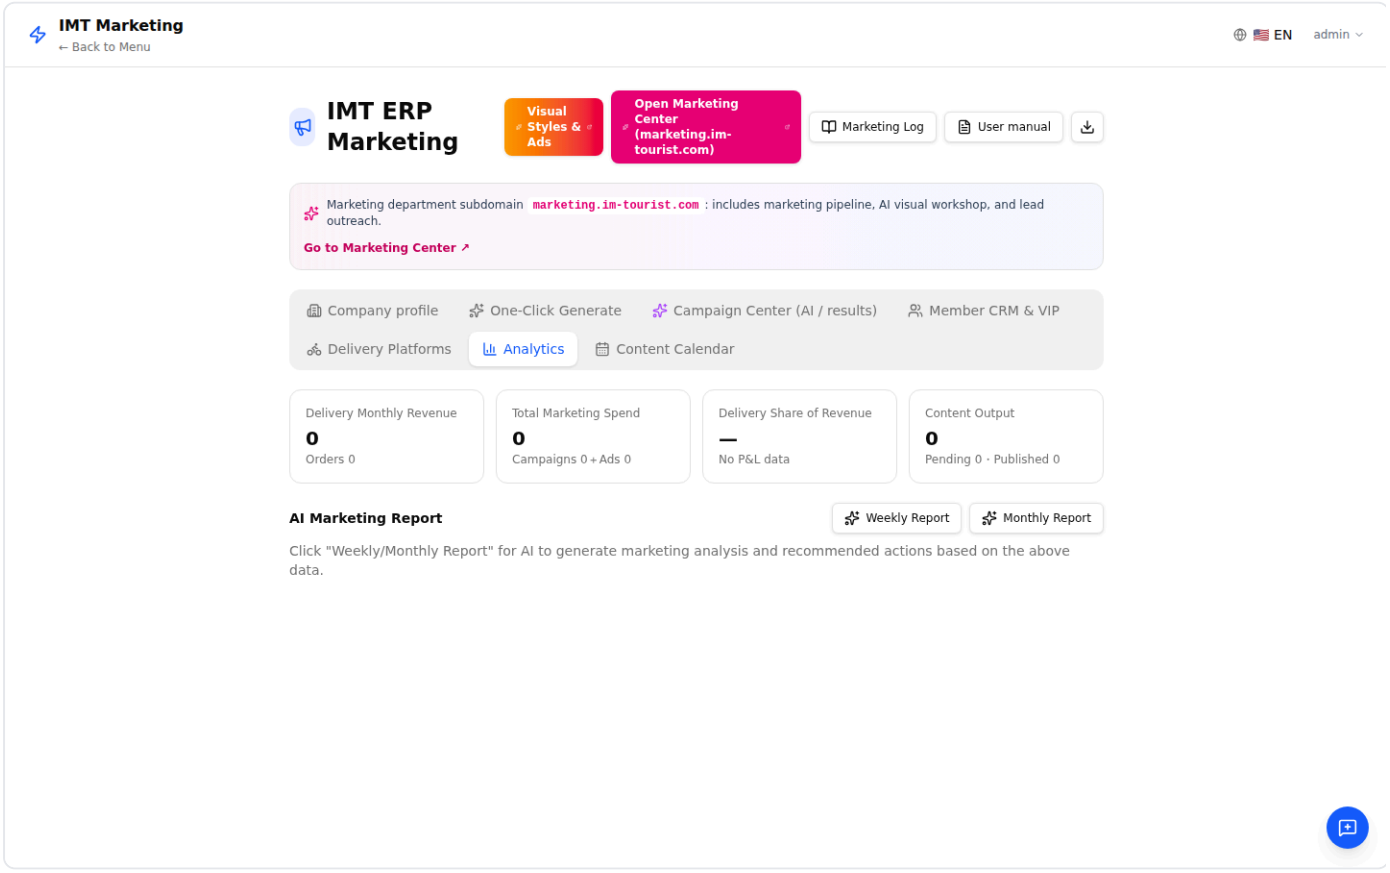

- Member tiers: General, Silver, Gold, VIP, VVIP.
- Import members: upload .xlsx / .xls / .csv, or use "Quick batch import" and paste one member per line as "phone name tier". Members are matched by phone number; existing members are updated.
- VIP exclusive push: choose products and a deadline. AI writes a LINE push message and an SMS template; click copy and paste them into each platform to send.

Delivery Platforms

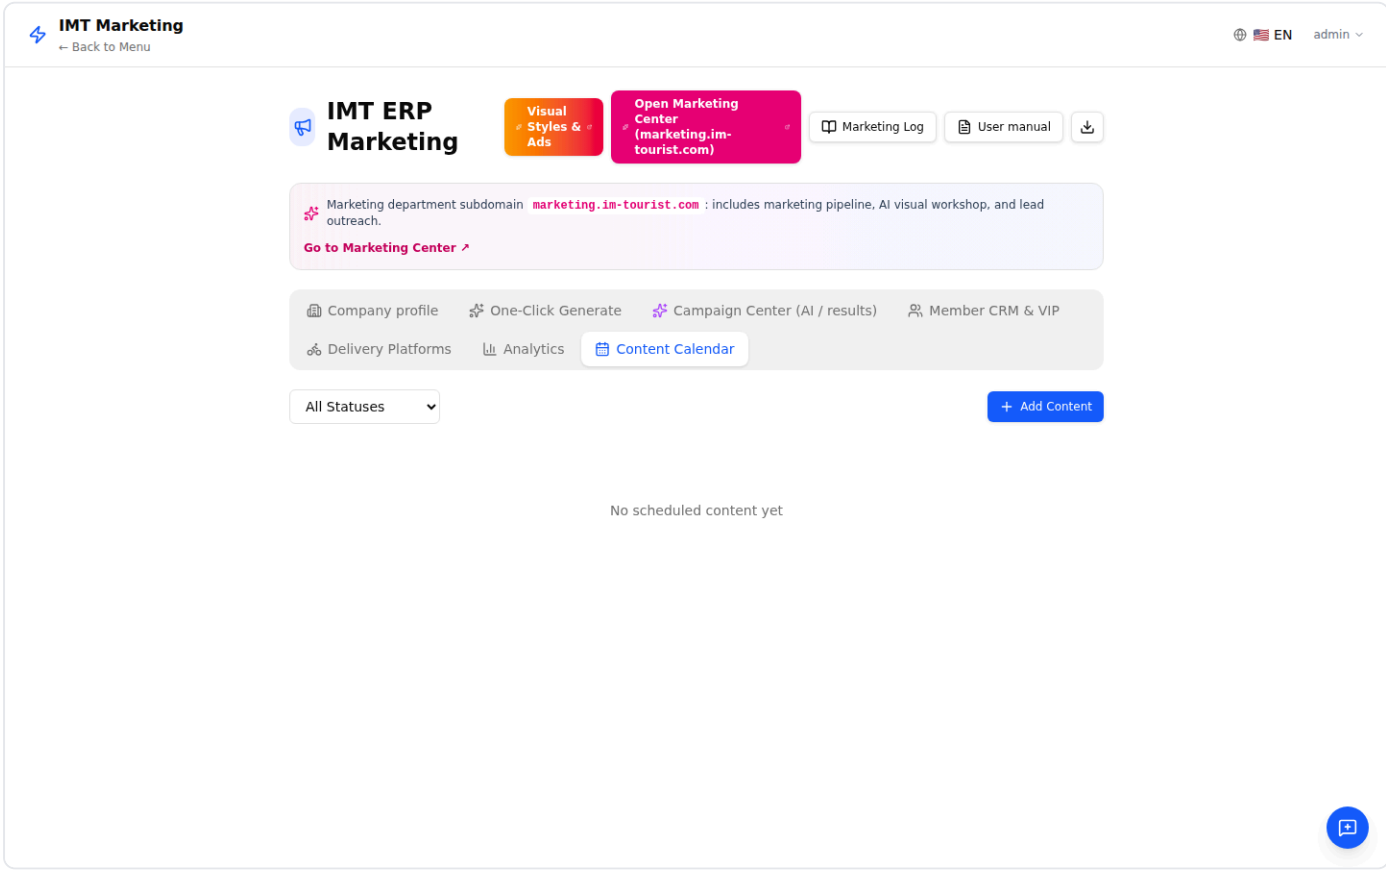

For every store on every delivery platform: listing status, store link, commission rate, rating, ranking, orders and revenue this month, and running promotions. Update the numbers once a month so that analytics stay accurate.

Analytics

Summarizes delivery revenue, total marketing spend (campaigns + ads), delivery share of revenue and content output. Click "Weekly Report" or "Monthly Report" and AI writes an analysis with recommended actions based on this data.

Content Calendar

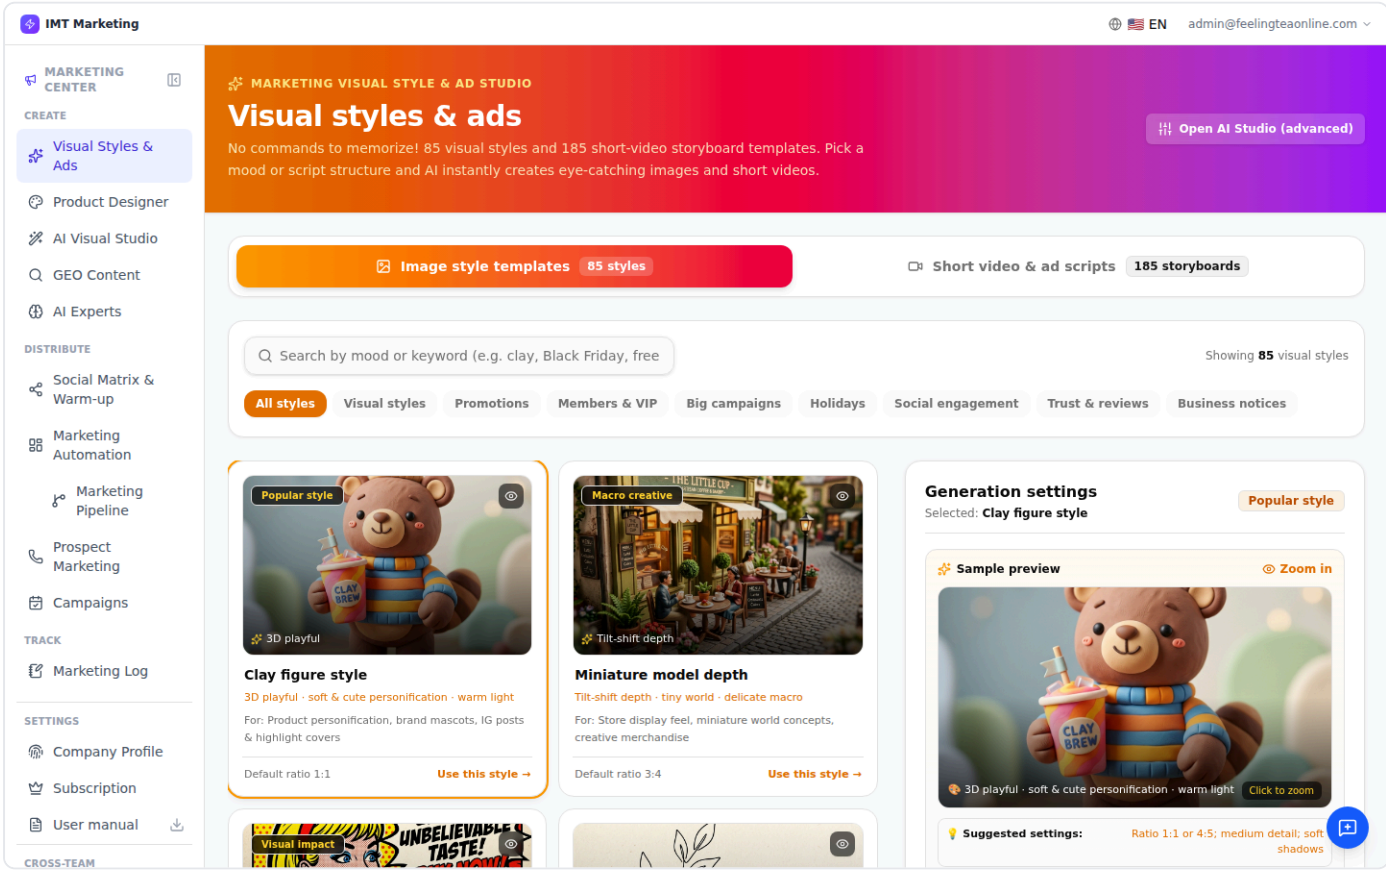

Schedule the platform and date for each post. Statuses go Idea → Draft → Pending Review → Scheduled → Published. Content approved in "One-Click Generate" appears here automatically with status "Scheduled".

Marketing Center: Create

The "Create" group in the left menu has five tools. All of them automatically use the brand and product information from "Company profile".

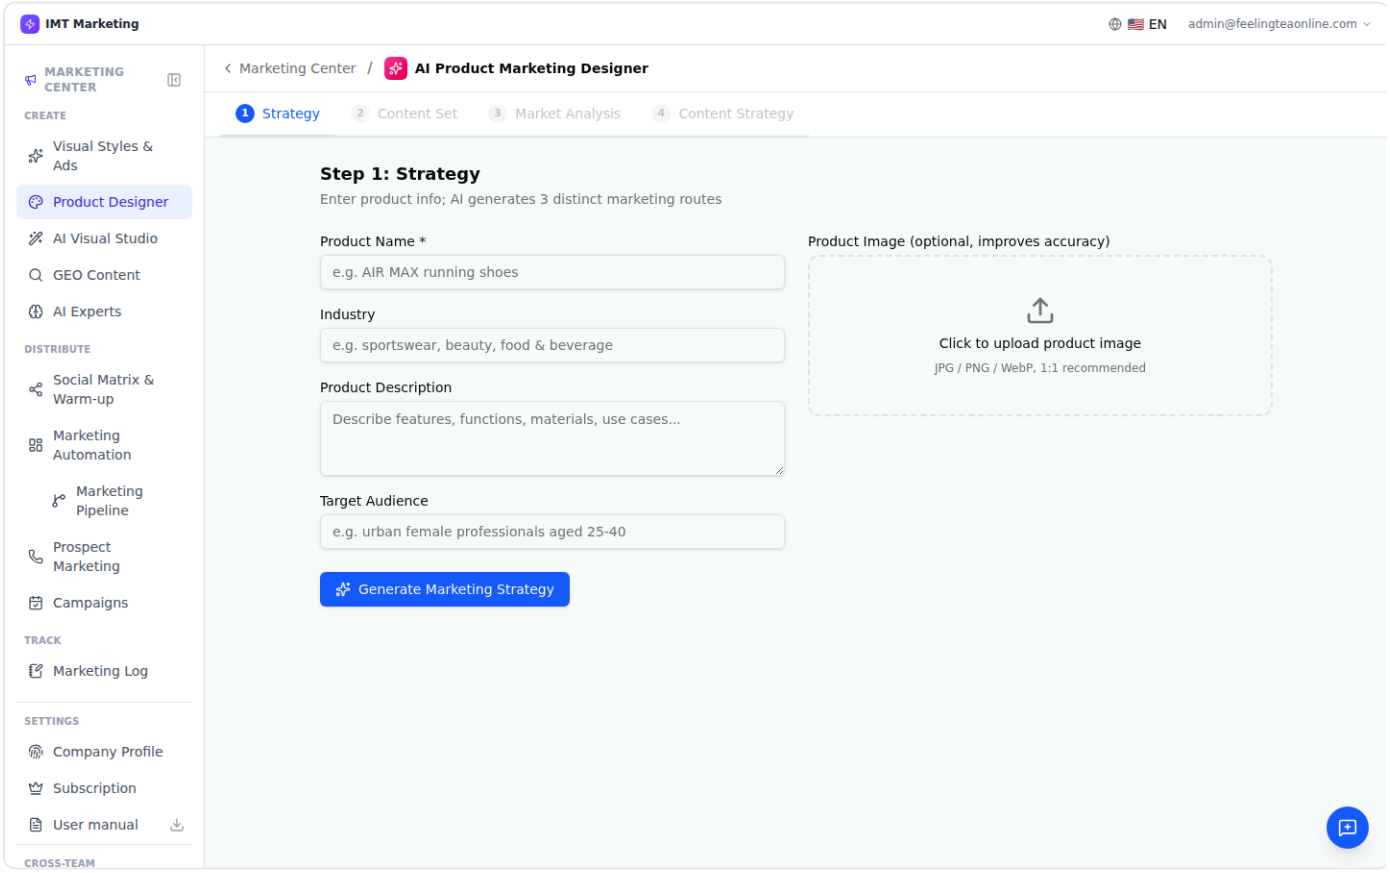

Visual Styles & Ads (/marketing/templates)

No prompts to memorize: pick a look and get an image or a short-video script.

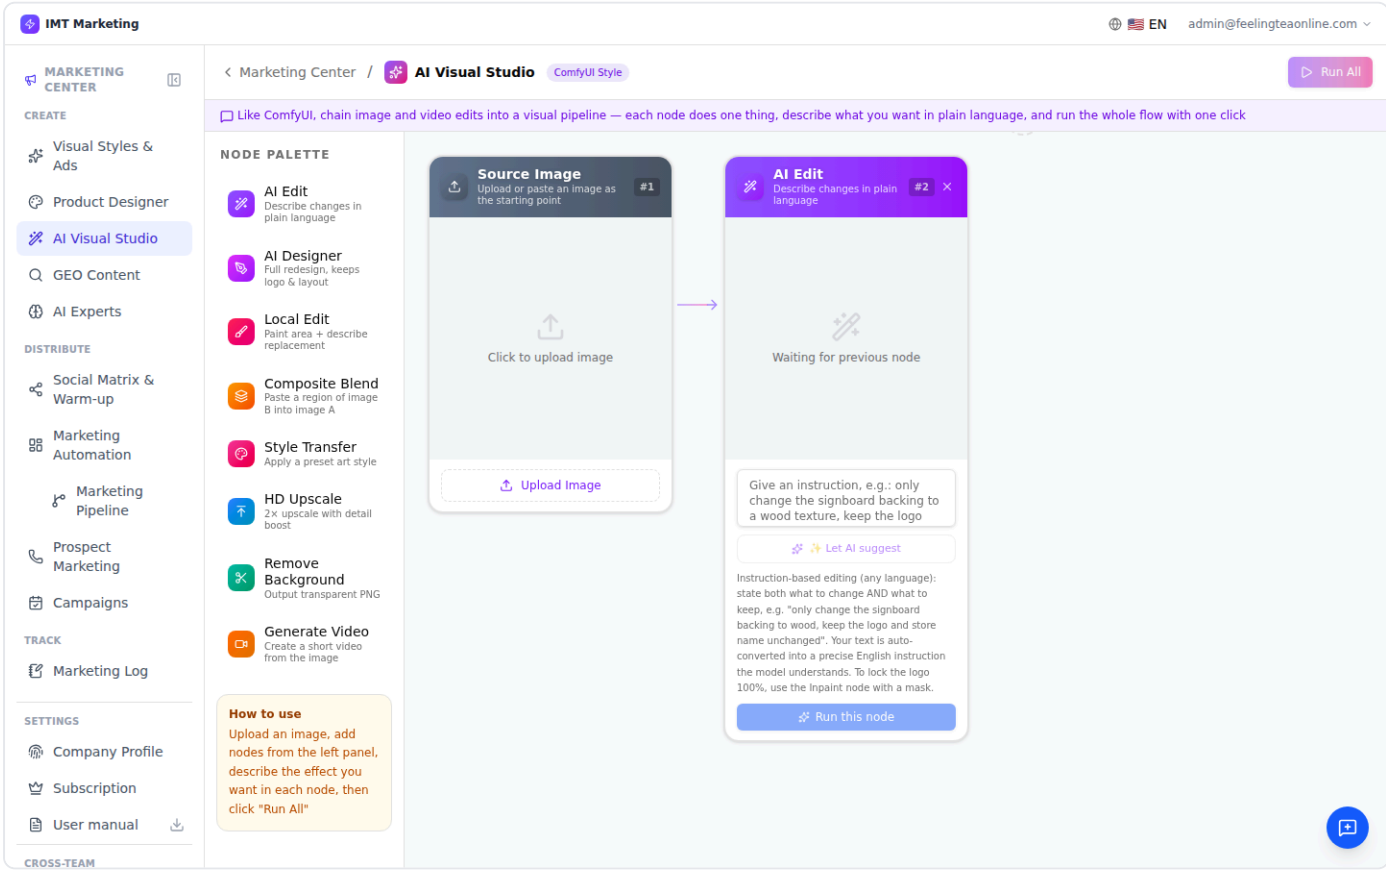

1. At the top, switch between "Image style templates" (85 styles) and "Short video & ad scripts" (185 storyboards).
2. Search by keyword, for example clay, Black Friday, free shipping, discount, holiday.
3. Click a sample image to enlarge it and see its parameters and recommended ratio, then click "Use this style →".
4. In "Generation settings", fill in the product and key message. You can upload a reference image (JPG, PNG, WebP).
5. Generate the image. Video requires the PRO plan or higher and takes about 30–60 seconds after submitting; if it times out, check AI Visual Studio later.

Product Designer (/marketing/product-designer)

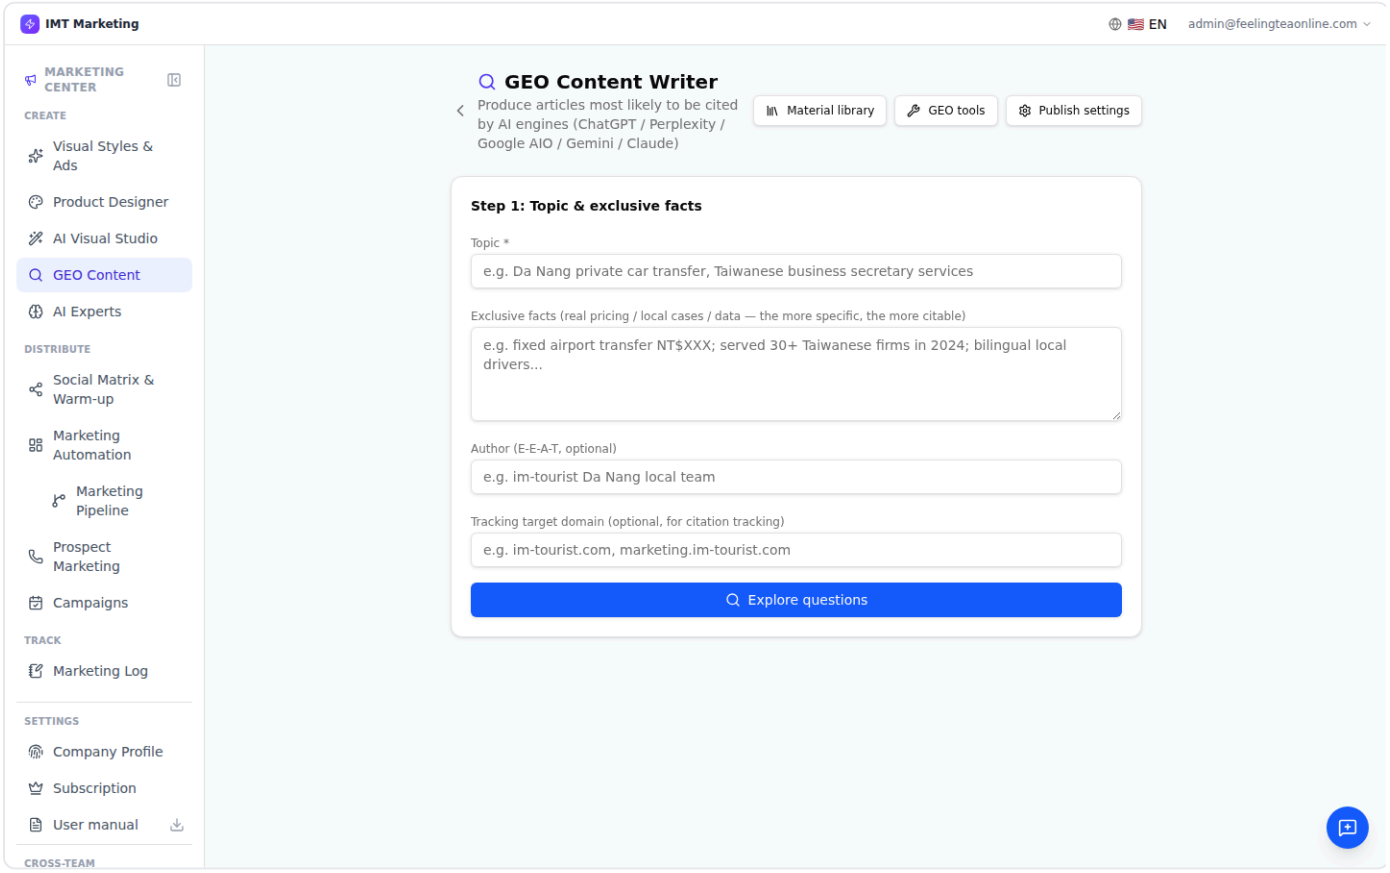

Upload one product photo and AI builds a four-step marketing pack: marketing strategy → content mix → market analysis → SEO content strategy. Run it before a product launch and use the result to set up a campaign.

AI Visual Studio (/marketing/ai-studio)

Advanced image editing and image-to-video. Upload an image, then chain processing steps in plain language (edit, style transfer, upscale, background removal, generate video) and run them in one go.

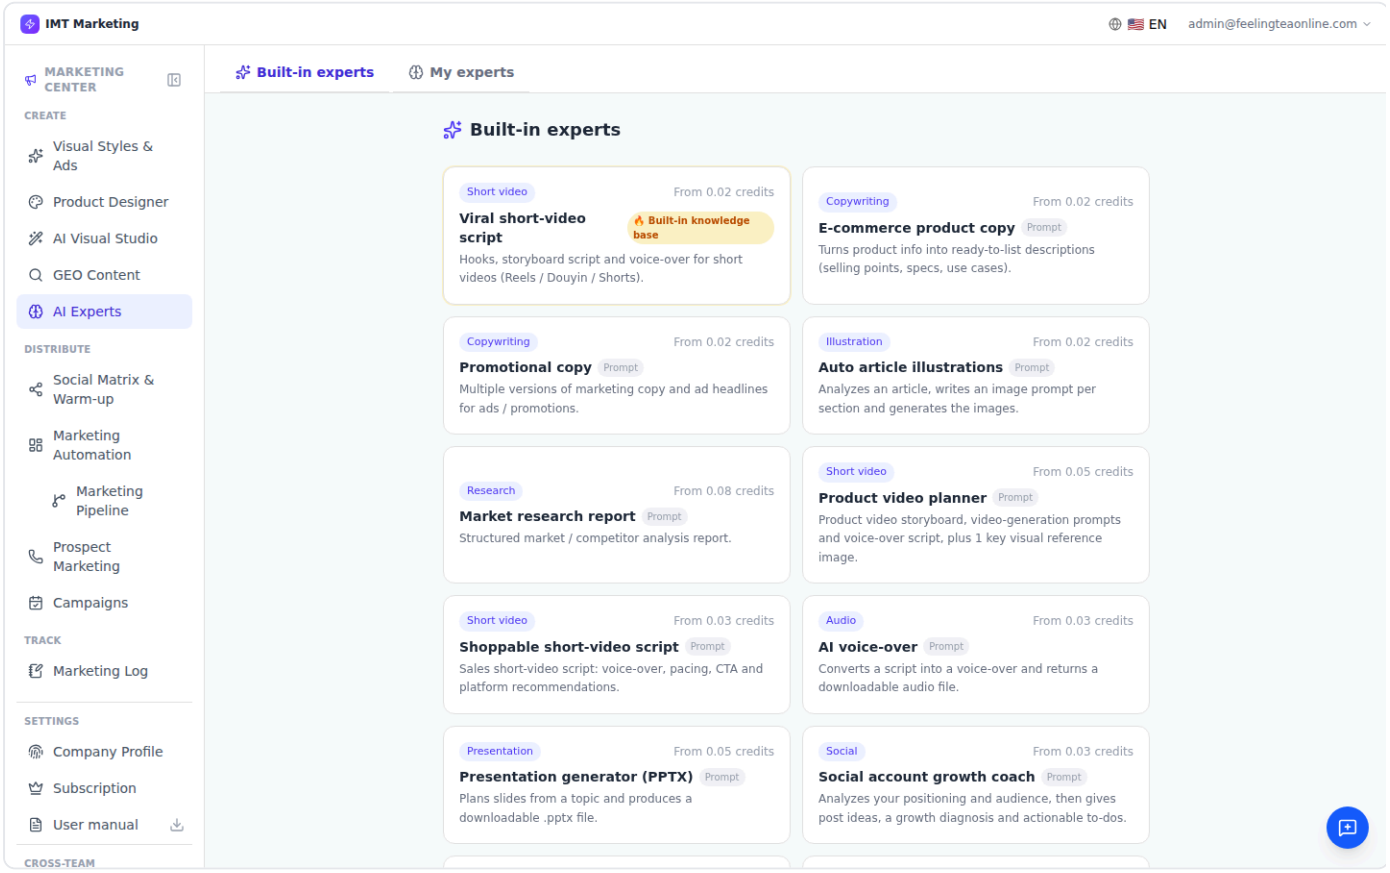

GEO Content (/marketing/geo-writer)

Articles written for AI search engines.

1. Enter the topic and the exclusive details only we know (prices, locations, service details).
2. AI finds and groups the high-intent questions customers actually ask.
3. It produces an article that ChatGPT, Perplexity and Google AI Overviews are likely to cite, with JSON-LD structured data ready to paste into the website.

AI Experts (/marketing/experts)

Includes built-in experts and custom experts. A custom expert turns company documents into a dedicated advisor:

1. Click "New expert" and enter a name (e.g. guesthouse regulations advisor), a one-line description and an answer style.
2. Add knowledge sources: URLs, pasted text or uploaded files (PDF, Word, Excel, CSV, TXT).
3. Type your question in "Ask the expert".

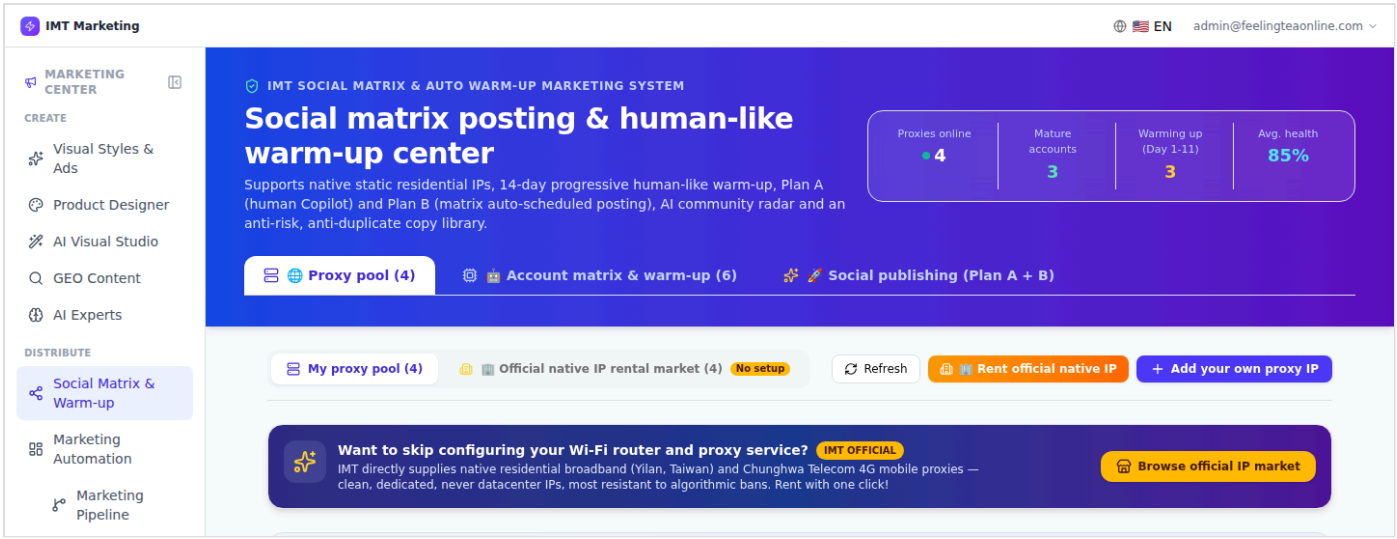

Action	Credits
Add a URL source	0.02 per URL + 0.01 per 1,000 characters
Add text or a file	0.01 per 1,000 characters
Ask one question	0.05

Creating and training experts requires the PRO plan or higher; experts that already exist can be asked questions on any plan.

Marketing Center: Distribute

The "Distribute" group in the left menu sends finished content out and brings in new customers.

Social Matrix & Warm-up (/marketing/social-matrix)

Manage multiple Facebook, Instagram, Threads and TikTok accounts across three tabs:

Tab	What it does
Proxy pool	Add your own static IPs, or click "Rent official native IP" to buy ISP static IPs / residential proxies
Account matrix & warm-up	Add social accounts, bind each to a proxy IP and run a 14-day human-like warm-up
Social publishing (Plan A + B)	Enter what you are promoting; the AI social radar finds suitable groups and writes de-duplicated copy

Official proxy prices (USD, 1 credit = US$1)

Type	Price	Billing
ISP dedicated	US$3 / IP / month	Static IP with 100 GB of traffic per IP per month. Auto-renewed every 30 days; released at expiry if credits run out
ISP shared	US$2.8 / IP / month	
Residential	US$5.25 / GB	Billed by traffic only; GB never expire; "Add traffic" any time

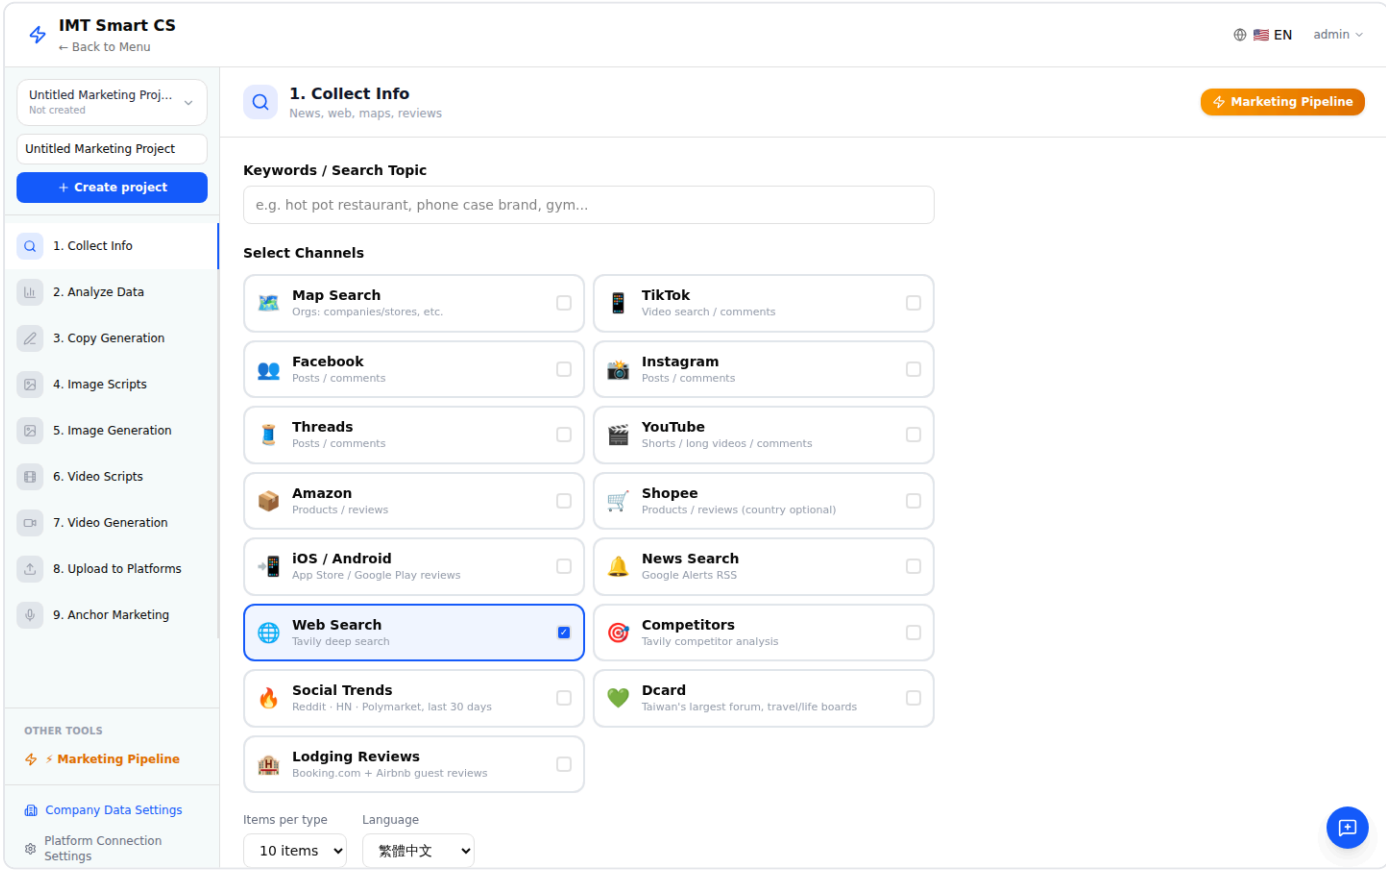

Buying residential proxies

1. Pick a country. On your first purchase enter the GB amount (minimum 1 GB); the system creates your own residential proxy account and adds 1 sticky-IP connection.
2. For other countries or more connections, click Buy again; no extra GB needed. All connections share the same traffic.
3. Each connection is a sticky IP that rotates every 7 days; bind one social account per connection.
4. When traffic runs low, click "Add traffic".

There are two ways to post:

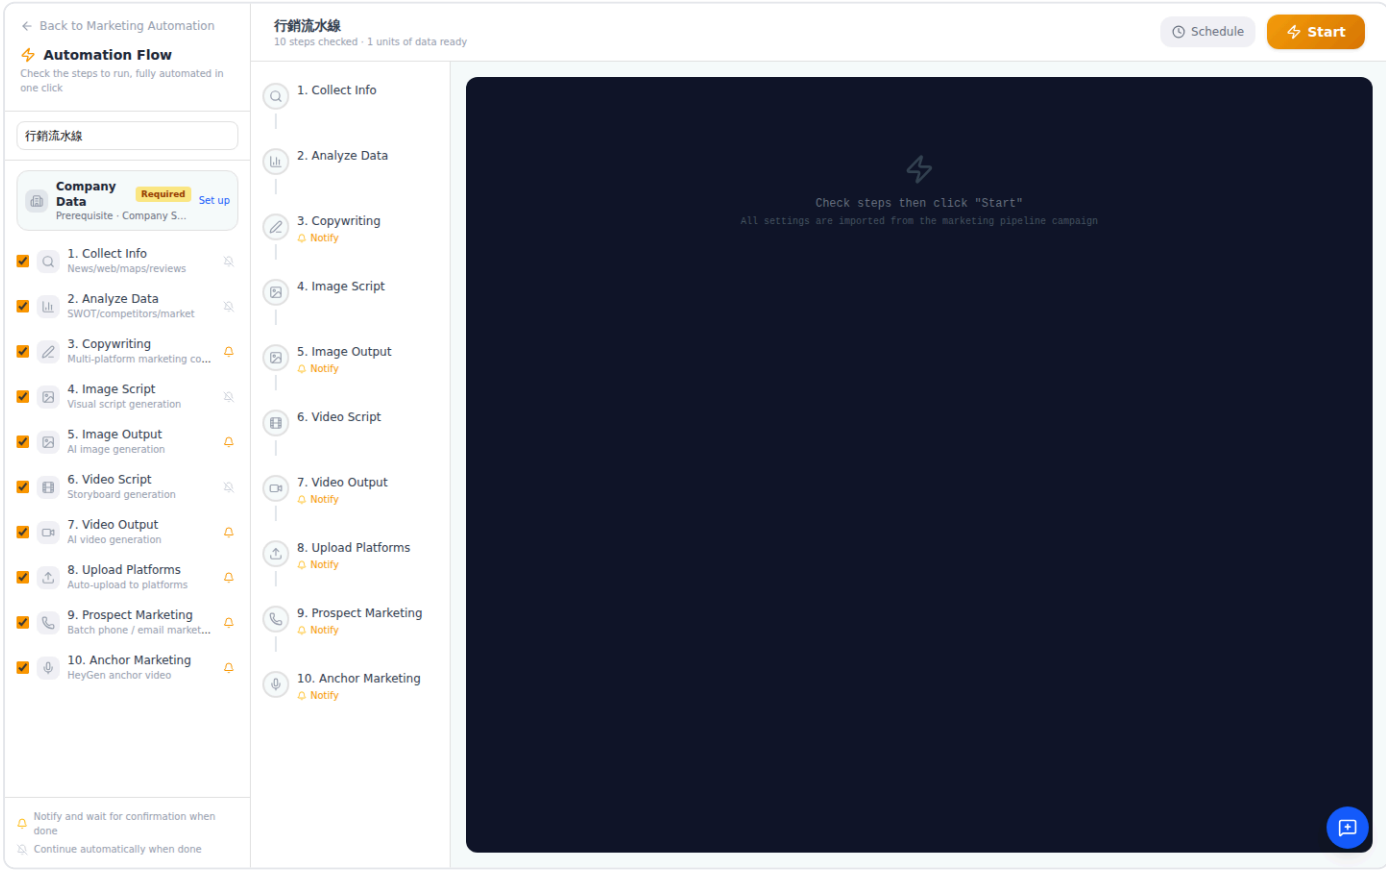

- Plan A (human Copilot): click "Plan A: Post manually ↗" next to a group. The system copies the text and opens the posting page; you paste and submit. Safest; use it for new accounts.
- Plan B (matrix auto-scheduled posting): only for accounts at warm-up Day 12 or later. Different copy goes to different accounts and IPs and posts automatically in batches.

Marketing Automation (/marketing-auto)

The full flow from data collection, competitor analysis (SWOT), target-audience simulation, copy, images and video to uploading to platforms. Supported platforms include Facebook, Instagram, Threads, LINE OA, Zalo, LinkedIn, Twitter/X, FB Reels, IG Reels, YouTube Shorts and TikTok.

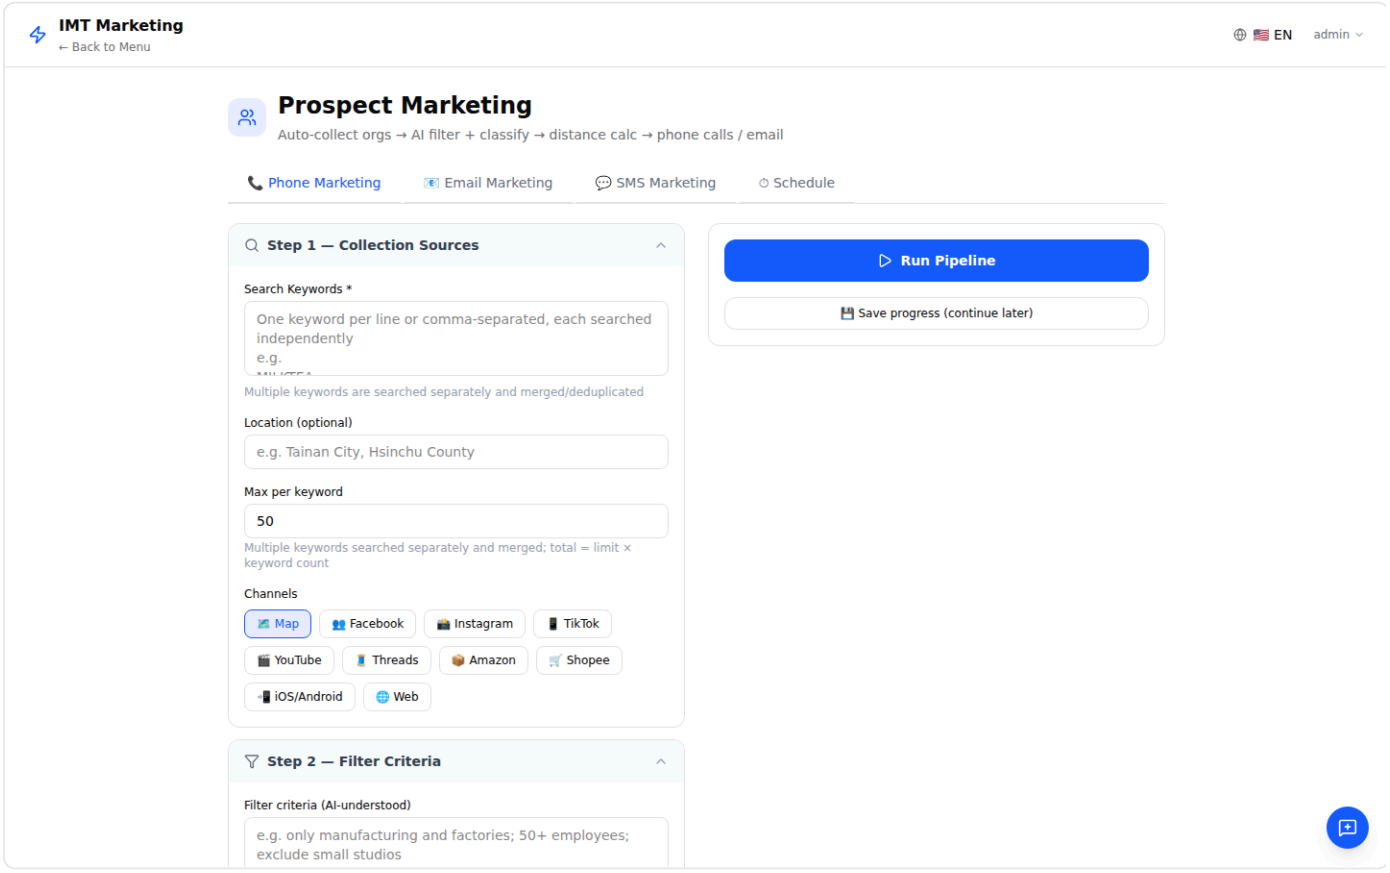

Marketing Pipeline (/marketing-pipeline)

Chains the marketing automation steps into one flow that runs on its own:

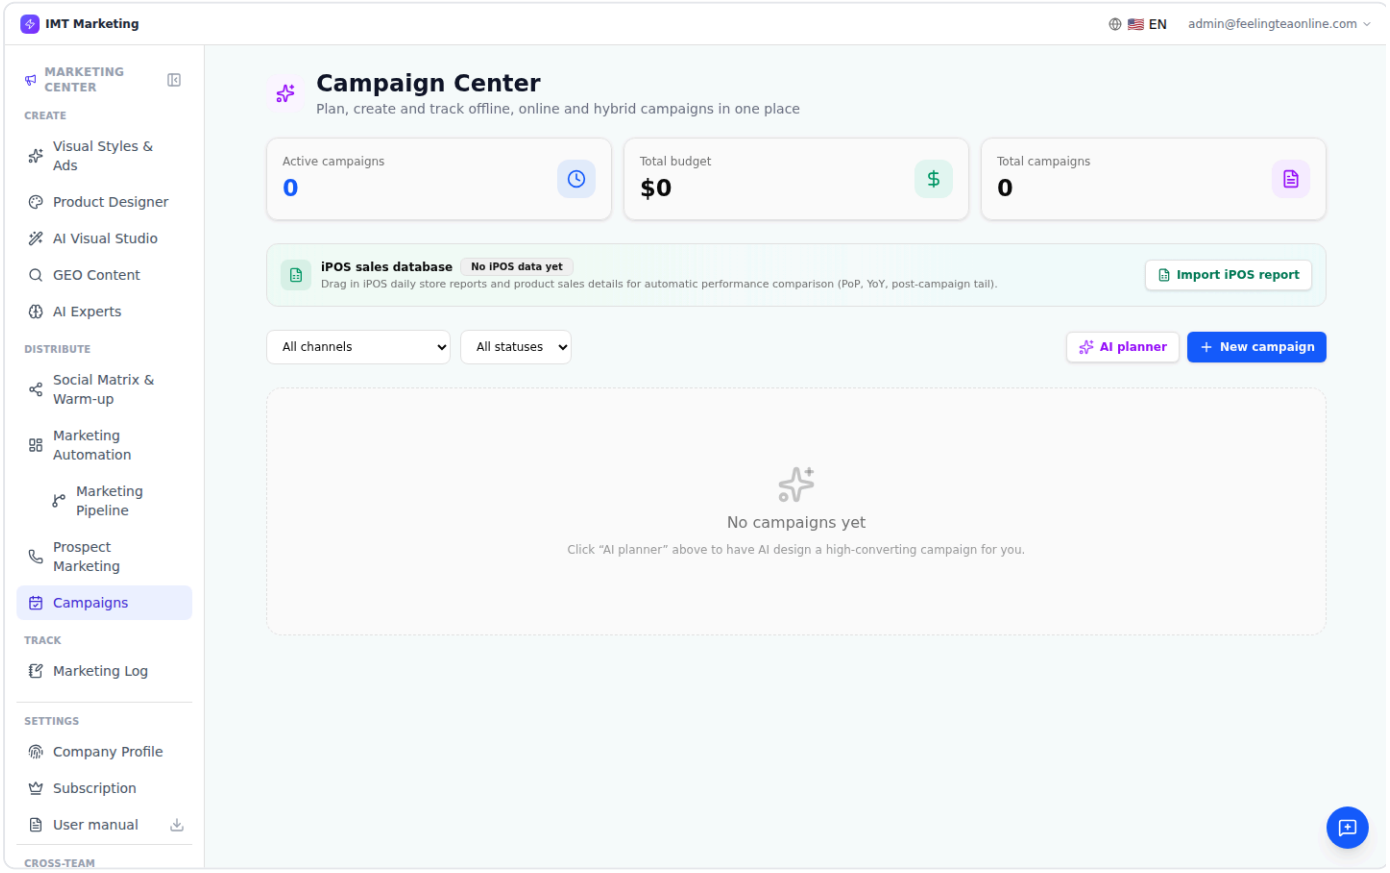

1. Tick the steps to run on the left.
2. For each step choose "Continue automatically when done" or "Notify and wait for confirmation when done". With notify, the system sends a Telegram message with buttons so you can confirm from your phone.
3. Click "Start".
4. To run it regularly, turn on "Schedule" and choose daily, weekly or monthly and a time. Settings are saved automatically.

Prospect Marketing (/prospect-call)

Proactive B2B outreach: the system collects organization lists → AI screens and groups them → calculates distance → makes contact. Tabs: "Phone Marketing", "Email Marketing", "SMS Marketing", "Schedule".

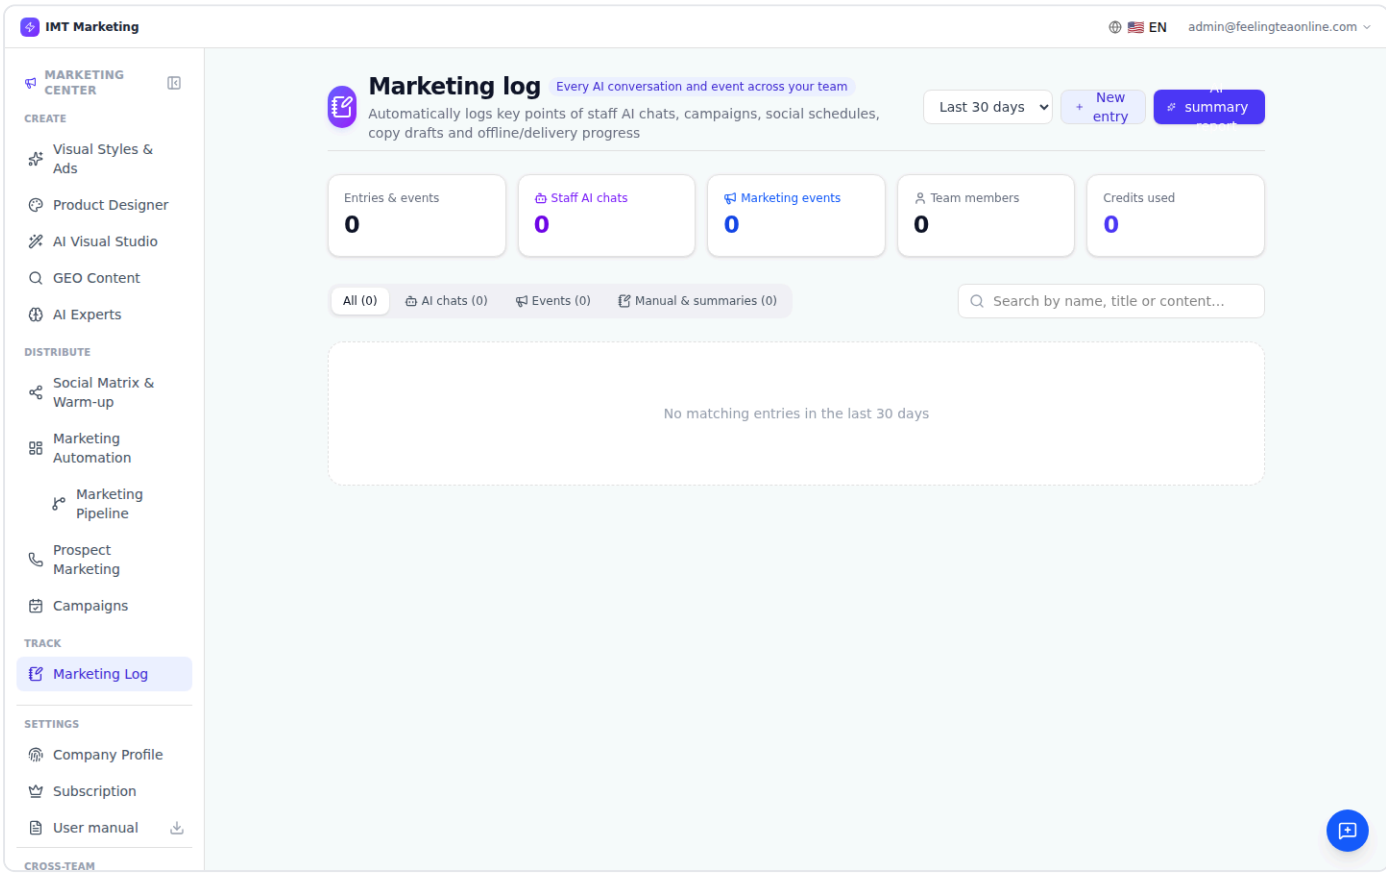

Campaigns (/marketing/campaigns)

The same feature and the same data as the office "Campaign Center"; see the earlier section for how to use it. Offline, online and hybrid campaigns are all created here; the old "Offline Marketing" has been merged in.

Marketing Center: Track & Settings

Marketing Log (/marketing/logbook)

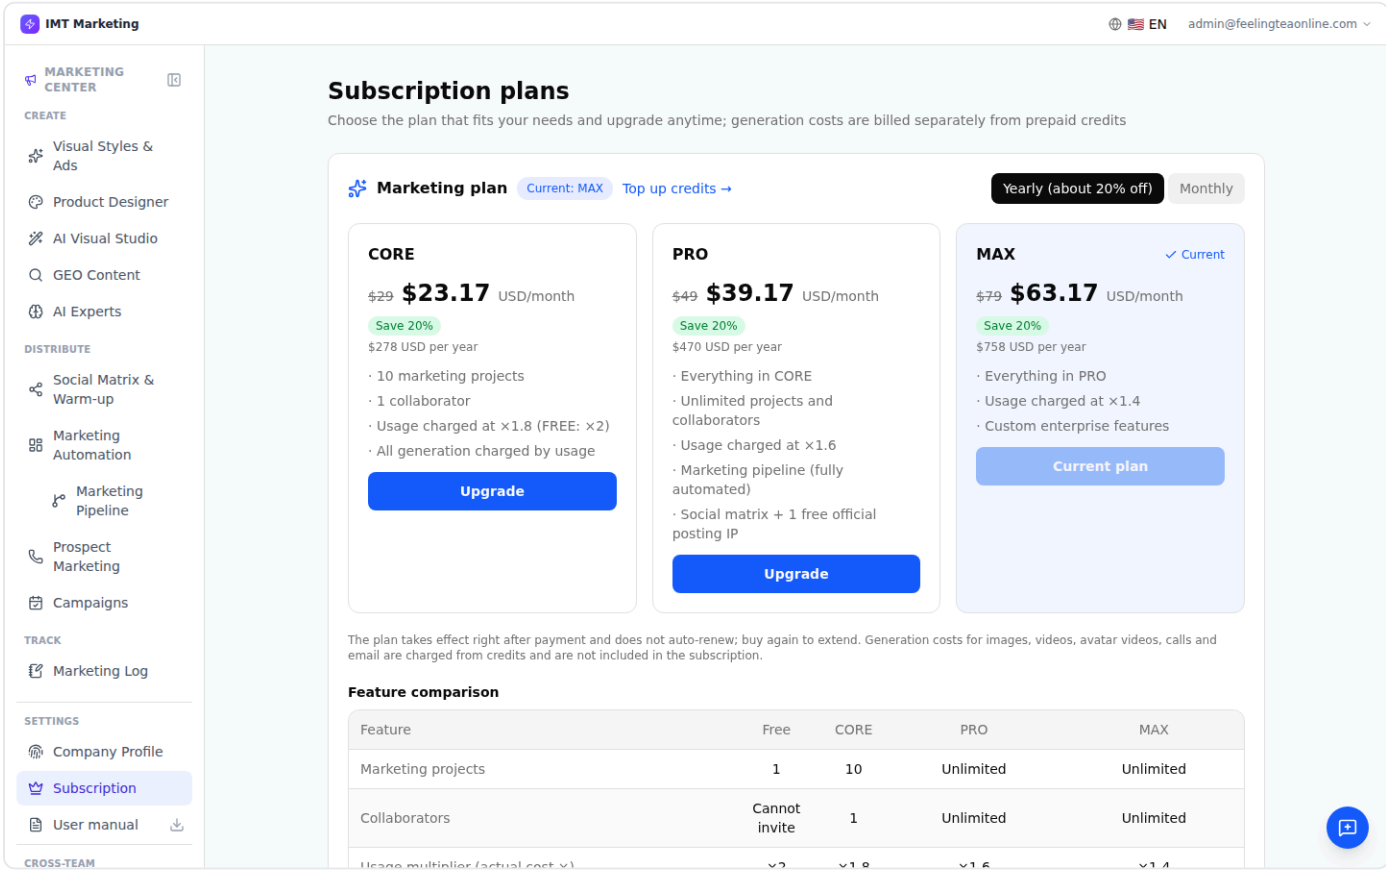

The system automatically records the key points of staff conversations with AI, marketing campaigns, social schedules, copy drafts and delivery progress. Nothing needs to be logged by hand.

- The cards at the top show total entries, staff AI chats, marketing output events, participating staff and credits used.
- Tabs: "All", "AI chat", "Events", "Manual & summaries". Filter by staff member, or search by name, title or content.
- When a meeting reaches a decision, click "New entry" and write down the topic and next steps, e.g. "Summer 2026 iced drinks promotion strategy confirmed".
- Click "AI summary report" for an AI-written report on operations and collaboration for the period; the full text can be copied in one click.
- Viewing requires marketing unit permission.

Company Profile (/marketing/brand)

The same editor and the same data as the "Company profile" tab in office marketing; edit it on either side. All AI tools use and cache this content, so the more complete it is, the more accurate the output.

Subscription (/marketing/plan)

Shows your current plan, this month's bonus credit balance and a feature comparison, and lets you top up credits.

- **Internal company accounts (admin, employee)**: not limited by plan. They are always treated as the top plan and generation does not use credits. Notices such as "Requires PRO plan or higher" or "Uses X credits" do not apply to staff.
- **External customer accounts (external)**: features depend on the plan. Images, video, presenter video, phone calls, email and other generation are charged separately in credits. Monthly bonus credits expire at the end of the month and do not roll over; on the free plan they are granted only after email verification. Payments take effect immediately and plans do not auto-renew.

FAQ and notes

Can't open marketing.im-tourist.com, or get redirected elsewhere? Your account needs the "Marketing" module; Prospect Marketing also accepts the "Leads" module. Ask an administrator to enable it.

Can office and marketing data get out of sync? No. Company profile and Campaign Center read and write the same data on both sides; editing on either side is the same.

Where did "Offline Marketing" go? It has been merged into the "Campaign Center". When creating a campaign, set the channel to "Offline (store / pop-up)". Old links redirect to the Campaign Center automatically.

Video never finishes? It usually takes about 30–60 seconds. If you see "Video generation timed out", check "AI Visual Studio" later. Don't submit again.

Social account notes

- Warm up new accounts first. Accounts below Day 12 can't use Plan B auto-posting; during warm-up, post with Plan A (post manually).
- Bind each social account to one proxy connection. After you release a rented IP, accounts bound to it need a new proxy.

ISP or residential? ISP is a static IP billed monthly with 100 GB per IP per month. Residential is billed by traffic (GB), GB never expire, and the IP rotates every 7 days. A shared ISP IP is shared with other customers.

Which company owns the proxies and managed AdsPower I buy? The company currently selected at the top right. Credits are charged to that company, and proxies, residential traffic and managed AdsPower belong to it. To buy for another company, switch company at the top right first. Each person has a separate residential account per company; traffic is not shared between companies.

AI output inaccurate? First check that the brand, product and store data in "Company profile" is complete and correct. Every AI tool relies on it.

Before publishing Have a person check AI-written copy, prices and offer terms before publishing. Record important decisions in the "Marketing Log".
